

Precision at its Best

No matter how grueling the task, you can count on PMM products to outlast and outperform the competition. Whether you need a custom-built screw conveyor or demand a custom-engineered rotary valve, we deliver. And you're sure to be impressed with our flagship product – the PMV rotary valve. It features PMM quality in a design that is easily rebuilt on-site.

All PMM products are precision-fabricated – not cast – with tolerances for ambient or elevated temperatures available on request.

But no matter which product you need, the PMM promise remains the same: You can count on us for precise engineering, durable construction, high-quality materials and smart designs for your biggest challenges.

PMV™ (Bolt-together) Rotary Valve

Built for the harshest industrial environments, there's not much this severe-duty rotary valve can't take. However, if your valve requires attention, you'll save vast amounts of time and money because this modular unit can be quickly rebuilt on-site – and sometimes, even in place. Should you need parts, you can count on quick delivery.

PMF (Bolt-together) Rotary Feeder

This modular rotary feeder allows you to make repairs on-site rather than sending the entire unit in for repairs. Of course, given the quality materials and precise fabrication featured, it's unlikely you'll need to take advantage of the bolt-together design often.

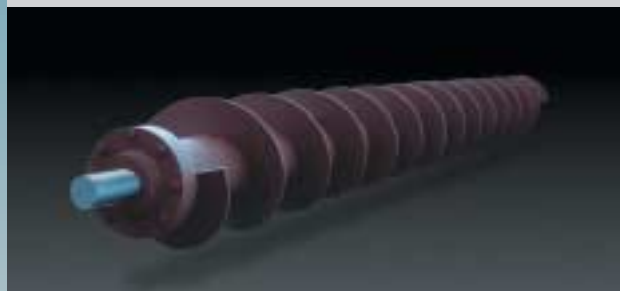

Precision Economy Valve

This steel valve is full-featured and entirely fabricated – not cast – to deliver precise tolerances and long-lasting durability. Available in many sizes that cover a wide range of capacities, you'll appreciate the affordability this medium-duty valve offers.

Precision Micro-Valve

Our micro valve provides precise metering in low and medium capacity requirements. PMM's focus on precision and quality materials really pays off with this dependable, high-performing valve.

Screw Conveyor

No matter what your conveyor needs, PMM can meet them. We'll help you select the best material for the job and will manufacture the parts to your exact specifications. Whether you need a severe-duty screw conveyor, or something a little more lightweight, you can count on us for high-quality and durable results.

PMR Rotary Feeder

This durable precision rotary feeder performs in almost any application. The PMR is definitely "best in its class" when it comes to quality, performance, dependability and affordability. It is available in a wide variety of sizes and can also be custom-manufactured to meet your needs.

PMM: Constant Innovation

Every PMM product showcases pride of workmanship and attention to detail.

From engineering to production, our emphasis is on precision. With many years of experience and a team of expert machinists, engineers and perfectionists behind the scenes, you can count on PMM.

- *Quality*
- *Dependability*
- *Rugged*
- *Custom*
- *Innovative*
- *Value Added*

There are certainly other manufacturers of rotary valves, screw conveyors and the like. But no one else does it like PMM. Our focus on constant innovation, combined with our many years of experience, helps us identify solutions to your production needs. We're not afraid of taking a product and overhauling and improving it to take it to new levels of performance, dependability and usability.

We consider every use on a case-by-case basis and help you determine the best design, model and material for the job. In addition to manufacturing individual components, PMM designs and builds entire systems. Whether your needs are for cogeneration, powder chemicals, cement, or even caustic and corrosive materials, we can meet – and exceed – your expectations.

PMM began in 1977 when we put our expert machining abilities to work filling custom orders for a number of industries. Today we specialize in designing and fabricating solutions for medium and severe-duty needs of all sorts.

PMM's state-of-the-art machining, fabrication and welding departments feature the finest equipment available. For example, our robotic welder quickly provides the precise, strong bonds that you depend on.

Featuring the "right tools for the right job," our machine shop is equipped with computer-controlled lathes, machining centers, saws and plate-burning machines. All of this delivers quality, precise products that strengthen your operations.
